Nobita is an advanced, AI-powered, ceiling-mounted device that integrates multiple assistive functions specifically aimed at protecting older adults and people with mobility or cognitive impairments from fall-related injuries. Unlike conventional lighting, Nobita is purpose-built as a proactive care and monitoring system, combining fall detection, emergency alerts and two-way voice communication so caregivers can speak directly with residents when help is needed. Nobi's little sister, Nobita is sleekly designed for smaller rooms such as kitchens and bathrooms.
